

CHESTERTON COMMUNITY COLLEGE

SCIENCE LABORATORY REFURBISHMENT

A-Z Partnership were awarded the contract to refurbish two of the science laboratories at Chesterton Community College and tasked to provide two modern learning environments.

A-Z stripped out all of the old furniture, redundant mechanical and electrical services, then laid new floors, decorated throughout, installed new ceilings and lighting and then installed new furniture to meet the requirements of the school. This, in some labs, entailed the replacement of old linear bench rows with modern islands allowing flexibility for a variety of practical and theory layouts. This initial project was completed within the summer holiday period to ensure no disruption to the timetable.

Following this successful project, the college decided to continue its extensive refurbishment programme and continued to plan for the refurbishment of all of the other laboratories in the department. Following a rigorous tender process, A-Z Partnership was successful in securing the order for the remaining five laboratories. The programme of works was then negotiated with the college and the majority of the work was completed using half term holidays and weekend access, again, to minimise the disruption to the college timetable. A-Z's flexibility in delivering solutions meant that the challenging four-week time constraint was met and the project delivered on time, in full and within the budget.

Working with A-Z for our science refurbishments has been a painless task from our point of view from start to finish. Nothing is too much trouble for A-Z, they run a friendly but highly professional business. A-Z helped us design detailed specifications to assist with the tendering process. Their quotes were keen; the products they use are high quality as is the workmanship. Timescales have been adhered to and project management on site has been invaluable. I would have no hesitation in recommending A-Z to any organisation. They're a dream team I only wish all contractors were so dedicated to providing such a quality service.

TRACY RODEN, COLLEGE BUSINESS MANAGER
